Monthly Valuation Analysis

As of June 30, 2021

Wilshire

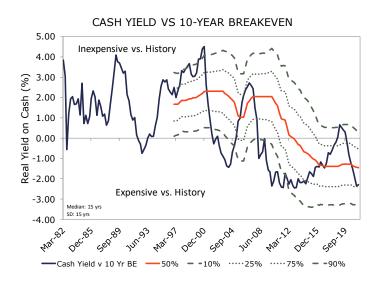

Introduction

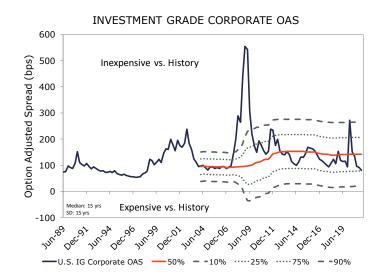

- Analysis includes current valuation levels versus historical norms within and among various asset classes
- Historical time period used is the past 15 years ending the most recent quarter-end
- Most exhibits include a 'median' line along with breakpoints calculated assuming a normal distribution:
 - Conditions are expressed as probabilities with the low end (1%) implying an "expensive" situation and the high end (99%) as "inexpensive" versus history
 - +/- 0.67 standard deviations represents the 75/25% outcomes
 - +/- 1.28 standard deviations represents the 90/10% outcomes

Cross-Asset Class Valuation

- Matrix below summarizes relative relationships among asset classes
- 15 years of yield data is used for each median calculation; 15 years for the standard deviation
- Difference in yield is calculated and the resulting percentile of each outcome is included in the matrix, based on the historical median and standard deviation
