# Kentucky Employees Retirement System (KERS)

Actuarial Valuation Report as of June 30, 2025

December 3, 2025

Board of Trustees Kentucky Retirement Systems Perimeter Park West 1260 Louisville Road Frankfort, KY 40601

**Subject:** Actuarial Valuation as of June 30, 2025

Dear Trustees of the Board:

This report describes the current actuarial condition of the Kentucky Employees Retirement System (KERS) and provides the actuarially determined employer contribution for fiscal years ending June 30, 2027 and June 30, 2028. In addition, the report analyzes changes in KERS's financial condition and provides various summaries of the data.

#### **EXECUTIVE SUMMARY OF VALUATION RESULTS**

The first page of the executive summary provides a table with a comparison of the valuation results from 2024 to 2025. Fund investments earned between 11.0% and 11.8% in fiscal year 2025, with returns varying by fund, which resulted in \$433 million (\$311 million pension and \$122 million insurance) more in assets than expected at the beginning of the year.

Retirement fund liabilities were \$202 million larger than expected for both funds combined, primarily attributable to salary increases for individual member being greater than expected. There was also a net \$354 million liability loss for the insurance funds primarily due to higher than expected health insurance premiums for 2026.

The normal cost rate for the non-hazardous funds decreased by 0.23% to 7.76% of pay and the amortization cost increased by \$2 million to \$868 million. This reflects a \$23 million decrease in the amortization cost for the pension fund primarily due to the additional \$300 million in appropriations expected to be received by the pension fund in fiscal year 2026, and a \$25 million increase in the amortization cost for the insurance fund primarily due to the higher than expected health insurance premiums.

The contribution rate for the hazardous funds decreased by 1.85% of pay to 18.83% of pay. This reflects a 1.85% decrease in the pension fund contribution rate, primarily due to favorable investment returns. The required contribution rate for the insurance fund remained at 0% of pay.

The following table provides the projected contributions for the non-hazardous and hazardous fund for the next 30 years (retirement + insurance), as well as the unfunded actuarial accrued liability and funded ratio for each retirement fund (excluding insurance). These projections assume that all actuarial assumptions are realized and the full actuarially determined contributions are made each future year.

## Projected Contributions, Unfunded Liability, and Funded Ratio (\$ in Millions)

	(1							
	Fiscal Year Beginning July 1,							
	2025	2029	2034	2044	2054			
	Year 1	Year 5	Year 10	Year 20	Year 30			
KERS Non-Hazardous								
Employer Contribution <sup>1</sup>	\$1,027	\$995	\$952	\$1,139	\$103			
Unfunded Liability – Pension Only	\$12,029	\$10,391	\$8,819	\$4,034	\$0			
Funded Ratio – Pension Only	29%	38%	46%	73%	100%			
KERS Hazardous								
Employer Contribution Rate <sup>1</sup>	23.74%	17.18%	15.57%	17.95%	7.16%			
Unfunded Liability – Pension Only	\$412	\$296	\$260	\$153	\$0			
Funded Ratio – Pension Only	72%	82%	86%	94%	100%			

<sup>&</sup>lt;sup>1</sup> Employer Contribution shown includes required contributions for both the retirement and insurance funds, and include both the normal cost and amortization cost components of the contribution requirement.

### FINANCING OBJECTIVES AND FUNDING POLICY

The employer contribution is determined in accordance with Section 61.565 of Kentucky Statute. As specified by the Statute, the employer contribution is comprised of a normal cost contribution and an actuarial accrued liability contribution. The actuarial accrued liability contribution is calculated by amortizing the unfunded accrued liability as of June 30, 2019 over a closed 30-year amortization period (24 years remaining as of June 30, 2025). Gains and losses incurring in years after June 30, 2019 are amortized as separate closed 20-year amortization bases.

If the contributions made are equal to the Actuarially Determined Contribution (ADC), and if all actuarial assumptions are met, there will not be an unfunded accrued liability at the end of the 24-year period remaining from the original closed 30-year amortization base (i.e. as of June 30, 2049). Accordingly, the ADC under the funding policy can be considered a "Reasonable Actuarially Determined Contribution" as required by the Actuarial Standards of Practice.

Board of Trustees December 3, 2025 Page 3

House Bill 8 passed during the 2021 legislative session and specified the method for allocating and collecting contributions from the participating employers in the non-hazardous fund. Each employer will pay a normal cost contribution on the payroll of their covered employees and contribute to the fund an allocated share of the cost required to amortize the unfunded liability.

Additionally, HB 1 and HB 6 were enacted in the 2024 legislative session and provided an additional \$300 million in appropriations to finance the unfunded actuarial accrued liability of the KERS non-hazardous retirement fund in FY 2025 and FY 2026. The appropriations for FY 2025 were reflected in the contribution requirement calculated in the prior year's valuation. The appropriations for FY 2026 have been reflected in the contribution requirement in this year's valuation.

#### **ASSUMPTIONS AND METHODS**

The Board of Trustees, in consultation with the actuary, sets the actuarial assumptions and methods used in the actuarial valuation. Except where noted in this report, the assumptions used in this actuarial valuation are based on an experience study conducted with experience through June 30, 2022, adopted by the Board of Trustees on June 5, 2023.

The results of the actuarial valuation are dependent on the actuarial assumptions used. Actual results can, and almost certainly will, differ as actual experience deviates from the assumptions. Even seemingly minor changes in the assumptions can materially change the liabilities, calculated contributions, and funding periods. The actuarial calculations are intended to provide information for rational decision making.

#### **BENEFIT PROVISIONS AND DATA**

The benefit provisions reflected in these valuations are those which were in effect on June 30, 2025. There were no material benefit provision changes since the prior valuation.

Member data for retired, active and inactive members was supplied as of June 30, 2025, by the Kentucky Public Pensions Authority (KPPA) staff. The staff also supplied asset information as of June 30, 2025. We did not audit this data, but we did apply a number of tests to the data, and we concluded that it was reasonable and consistent with the prior year's data. GRS is not responsible for the accuracy or completeness of the information provided to us by KPPA.

Board of Trustees December 3, 2025 Page 4

#### CERTIFICATION

We certify that the information presented herein is accurate and fairly portrays the actuarial position of KERS as of June 30, 2025.

Separate reports are issued with regard to valuation results determined in accordance with Governmental Accounting Standards Board (GASB) Statements 67, 68, 74 and 75. Results of this report should not be used for any other purpose without consultation with the undersigned. Valuations are prepared annually as of June 30, the first day of the plan year for KERS. This report was prepared at the request of the Board of Trustees of the Kentucky Retirement Systems (Board) and is intended for use by KPPA staff and those designated or approved by the Board.

All of our work conforms with generally accepted actuarial principles and practices, and is in conformity with the Actuarial Standards of Practice issued by the Actuarial Standards Board. In our opinion, our calculations also comply with the requirements of Kentucky Code of Laws and, where applicable, the Internal Revenue Code, ERISA, and the Statements of the Governmental Accounting Standards Board.

To the best of our knowledge, this report is complete and accurate and is in accordance with generally recognized actuarial practices and methods. All of the undersigned are Enrolled Actuaries and members of the American Academy of Actuaries and meet all of the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion herein. In addition, all three are independent of KPPA and are experienced in performing valuations for large public retirement systems. This communication shall not be construed to provide tax advice, legal advice or investment advice.

Sincerely,

**Gabriel, Roeder, Smith & Company**

<sup>&</sup>lt;sup>1</sup> Reflects contribution rate payable as a percentage of covered payroll. For the non-hazardous fund, this includes the normal cost portion of the contribution requirement only. For the hazardous fund, this includes both the normal cost and unfunded liability portion of the contribution requirement.

<sup>&</sup>lt;sup>1</sup> Contribution rates calculated with the June 30, 2025 valuation are effective for fiscal years ending June 30, 2027 and June 30 2028.

### **Executive Summary (Continued)**

#### **Non-Hazardous Retirement Fund**

The unfunded actuarial accrued liability of the non-hazardous retirement fund decreased by \$497 million since the prior year's valuation to \$12.029 billion. This decrease was approximately \$80 million less than expected, primarily due to liability losses as a result of salary increases for individual members being greater than assumed. These liability losses were partially offset by favorable investment experience.

For FYE 2025, the non-hazardous retirement fund distributed \$1,071 million in benefit payments and administrative expenses, and received \$1,424 million in employer and employee contributions. As of June 30, 2025, plan assets for this system were \$5,061 million (excluding assets in the 401(h) account). To stabilize the financial condition of this system, it is imperative that contributions to the system continue to exceed the benefit payments.

Below is a chart with the historical actuarial value of assets and actuarial accrued liability. The divergence in the assets and liability from 2016 through 2020 was generally due to: (1) actual contributions being insufficient to finance the unfunded actuarial accrued liability, and (2) assumption changes. Since 2020, the unfunded actuarial accrued liability has been decreasing steadily due to the increased funding effort to the retirement system.

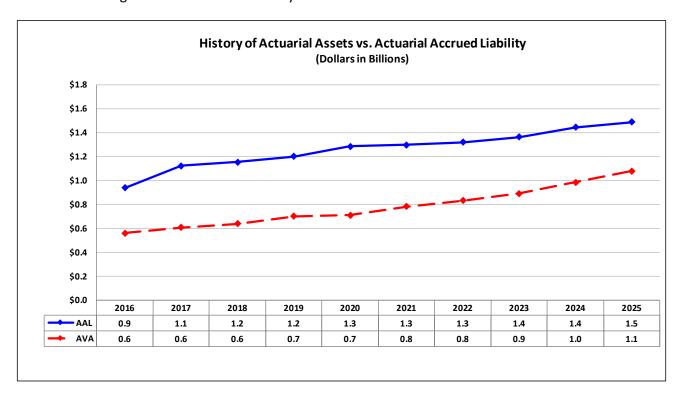

## **Executive Summary (Continued)**

#### **Hazardous Retirement Fund**

The unfunded actuarial accrued liability of the hazardous retirement fund decreased by \$46 million since the prior year's valuation to \$412 million. This decrease was approximately \$20 million more than expected, primarily due to favorable investment experience.

Below is a chart with the historical actuarial value of assets and actuarial accrued liability. The divergence in the assets and liability from 2016 through 2020 was generally due to: (1) actual contributions being insufficient to finance the unfunded actuarial accrued liability, and (2) assumption changes. Since 2020, the unfunded actuarial accrued liability has been decreasing steadily due to the increased funding effort to the retirement system.

### **Executive Summary (Continued)**

#### **Summary of Change in Financial Condition of the Insurance Funds**

The unfunded actuarial accrued liability of the non-hazardous insurance fund increased by \$275 million since the prior year's valuation to \$657 million. The funding surplus (assets in excess of the actuarial accrued liability) of the hazardous insurance fund increased by \$6 million since the prior year's valuation to \$279 million. The funding surplus was expected to increase by \$16 million; therefore, the funding surplus was \$10 million lower than expected.

The actuarial losses on the insurance funds are primarily due to the 2026 health insurance premiums being higher than expected. These liability losses were offset by favorable investment earnings.

On average, pre-Medicare premiums were approximately 8% higher than expected and Medicare premiums were approximately 28% higher than expected. In conjunction with the review of the healthcare per capita claims cost, the assumed increase in future healthcare costs, or trend assumption, is also reviewed on an annual basis. As a result of our review, the trend assumption was updated. In general, the updated assumption is using higher future increases in pre-Medicare and Medicare health costs. The ultimate annual trend assumption for pre-Medicare and Medicare Plans remained at 4.25%. The updates to the trend assumption increased the liability for the non-hazardous and hazardous insurance funds by approximately \$84 million and \$11 million, respectively.

## SECTION 2

**DISCUSSION** 

### **Discussion**

The Kentucky Employees Retirement System (KERS) is a defined benefit pension plan that provides coverage for employees of state government, non-teaching staff at regional state supported universities, local health departments, regional mental health/mental retardation agencies, and other quasi-state agencies. KERS includes both non-hazardous and hazardous duty benefits. This report presents the results of the June 30, 2025 actuarial funding valuation for both the retirement funds and insurance funds.

The primary purposes of the valuation report are to describe the current actuarial condition of KERS and provide the actuarially determined employer contributions for fiscal years ending June 30, 2027 and June 30, 2028. In addition, the report analyzes changes in KERS's financial condition, and provides various summaries of the data.

The actuarially determined contribution consist of two components: a normal cost rate and an amortization cost to finance the unfunded actuarial accrued liability. The normal cost rate is the theoretical amount which would be required to pay the members' benefits, based on the current plan provisions, if this amount had been contributed from each member's entry date and if the fund's experience exactly followed the actuarial assumptions. This is the amount that it should cost to provide the benefits for an average member. Since members contribute to the fund, only the excess of the normal cost rate over the member contribution rate is included in the employer contribution. The amortization cost is the amount necessary to amortize the unfunded actuarial accrued liability. The payroll growth rate and discount rate assumptions are selected by the Board. The funding period is specified in Section 61.565 of Kentucky Statute.

All of the actuarial and financial tables referenced by the other sections of this report appear in Section 3. Section 4 provides additional details related to the calculation of the amortization of the unfunded actuarial accrued liability. Section 5 provides member data and statistical information. Section 6 provides a discussion of various risk measures, which are intended to aid stakeholders in understanding the effects of future experience differing from the assumptions used in performing an actuarial valuation. Appendices A and B provide summaries of the principle actuarial assumptions and methods and plan provisions. Appendix C provides a glossary of technical terms that are used throughout this report. Finally, Appendix D provides the allocation of the amortization cost amongst KERS Non-Hazardous employers in accordance with Statutes enacted with the passing of House Bill 8 during the 2021 legislation session.

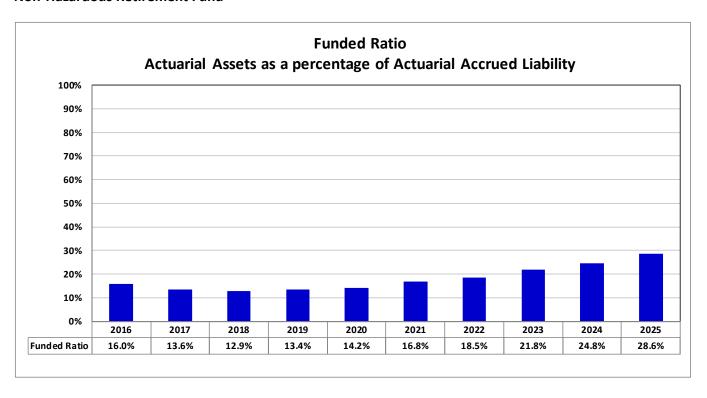

### **Funding Progress**

The following charts provide a ten-year history of the retirement funds' funded ratio (i.e. the Actuarial Value of Assets divided by the Actuarial Accrued Liability). The decline in the funded ratio in the first half of this ten-year period was generally due to: (1) actual contributions being insufficient to finance the unfunded actuarial accrued liability, and (2) decreases in the assumed rate of return.

The funded ratio has been gradually increasing for the past several years for both the non-hazardous and hazardous funds. Assuming the full actuarially determined contributions are paid in future years and absent material future unfavorable experience, the funded ratio is expected to continue improving. Also, the dollar amount of the unfunded actuarial accrued liability, or the difference between the actuarial accrued liability and the actuarial value of assets, is expected to continue a decreasing trend. Table 9, Schedule of Funding Progress, in the following section of the report provides additional detail regarding the funding progress of the retirement funds.

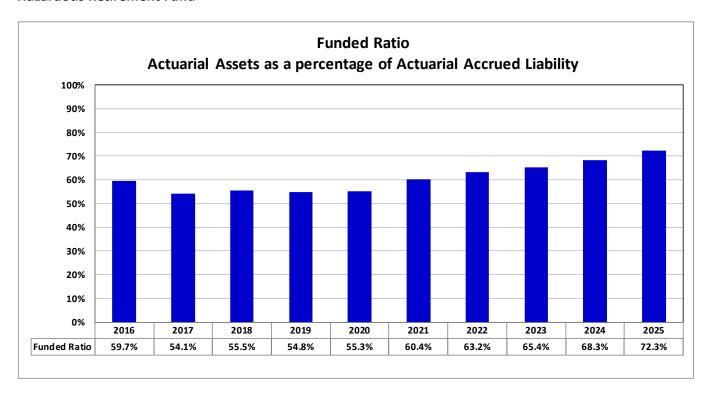

#### **Non-Hazardous Retirement Fund**

## **Funding Progress (Continued)**

#### **Hazardous Retirement Fund**

### **Asset Gains/ (Losses)**

The actuarial value of assets ("AVA") is based on a smoothed market value of assets, using a systematic approach to phase-in the difference between the actual and expected investment return on the market value of assets (adjusted for receipts and disbursements during the year). This is appropriate because it dampens the short-term volatility inherent in investment markets. The return is computed net of investment expenses.

#### **Non-Hazardous Retirement Fund**

The actuarial value of assets for the non-hazardous retirement fund increased from \$4.122 billion to \$4.810 billion since the prior valuation. The rate of return on the market value of assets on a dollar-weighted basis for the prior fiscal year was 11.0% which is greater than the 5.25% expected annual return. The return on an actuarial (smoothed) asset value was 7.8%, which resulted in a \$110 million gain for the fiscal year. The market value of assets is \$251 million more than the actuarial value of assets, which signifies that the retirement fund is in a position of net deferred investment gains to be realized in future years.

#### **Hazardous Retirement Fund**

Likewise, the actuarial value of assets for the hazardous retirement fund increased from \$985 million to \$1,076 million since the prior valuation. The rate of return on the market value of assets on a dollar-weighted basis for the prior fiscal year was 11.8% which is greater than the 6.25% expected annual return. The return on an actuarial (smoothed) asset value was 9.5%, which resulted in a \$32 million gain for the fiscal year. The market value of assets is \$61 million more than the actuarial value of assets, which signifies that the retirement fund is in a position of net deferred investment gains to be realized in future years.

Table 6 in the following section of this report provides asset information that was included in the annual financial statements of the funds, as well as the estimated yield on a market value basis. Tables 7 and 8 provide the development of the actuarial value of assets and the estimated yield on an actuarial value basis.

### **Actuarial Gains/ (Losses)**

The annual actuarial valuation is a snapshot analysis of the benefit liabilities, assets and funded position of the funds as of the first day of the plan year. In any one fiscal year, the experience can be better or worse from that which is assumed or expected. The actuarial assumptions do not necessarily attempt to model what the experience will be for any one given fiscal year, but instead try to model the overall experience over many years. Therefore, as long as the actual experience of a retirement system is reasonably close to the current assumptions, the long-term funding requirements of the system will remain relatively consistent.

Below are tables that separately show a reconciliation of the unfunded liability since the prior actuarial valuation for the retirement and health insurance funds, which includes the effect of asset and liability gains and losses, changes in assumptions, and changes in plan provisions. See the discussion in the Executive Summary for additional information related to the liability experience and additional information in this section of the report related to the asset experience, plan changes, and assumption changes.

## Retirement Experience Gain or (Loss) (Dollar amounts expressed in thousands)

		No	Non-Hazardous		lazardous

	11. Assumption change				
	12. Total	\$	(80,473)	\$	20,431

## **Actuarial Gains/ (Losses) (Continued)**

## Insurance Experience Gain or (Loss) (Dollar amounts expressed in thousands)

		Non-Hazardous		Hazardous	
A.	Calculation of total actuarial gain or loss				
	<ol> <li>Unfunded actuarial accrued liability (UAAL), previous year</li> </ol>	\$	382,701	\$	(272,781)
	2. Normal cost and administrative expenses		31,824		6,054
	3. Less: contributions for the year		(52,947)		(4,356)
	4. Interest accrual		24,189		(17,676)
	5. Expected UAAL (Sum of Items 1 - 4)		385,767		(288,759)
	6. Actual UAAL as of June 30,2025	\$	657,204		(279,258)
	7. Total gain (loss) for the year (Item 5 - Item 6)	\$	(271,437)	\$	(9,501)
В.	Source of gains and losses				
	8. Asset gain (loss) for the year	\$	49,659	\$	22,924
	9. Liability experience gain (loss) for the year		(321,096)		(32,425)
	10. Plan Change		_		_
	11. Assumption change				
	12. Total	\$	(271,437)	\$	(9,501)

Note, the liability experience gain (loss) shown above includes the impact of any trend assumption changes made in conjunction with the review of the healthcare per capita claims cost, as described in the Executive Summary.

## **Actuarial Assumptions and Methods**

In determining costs and liabilities, actuaries use assumptions about the future, such as rates of salary increase, probabilities of retirement, termination, death and disability, and an annual investment return assumption. The Board of Trustees, in consultation with the actuary, sets the actuarial assumptions and methods used in the actuarial valuation.

In conjunction with the review of the healthcare per capita claims cost, the assumed increase in future healthcare costs, or trend assumption, is reviewed on an annual basis. The trend assumption was increased as a result of our review. All other assumptions were adopted by the Board and are based on an experience study conducted based on experience through June 30, 2022. It is our opinion that the assumptions are internally consistent, reasonable, and reflect anticipated future experience of the System. Appendix A includes a summary of the actuarial assumptions and methods used in this valuation.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. This report does not include a more robust assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment.

This report was prepared using our proprietary valuation model and related software which in our professional judgment has the capability to provide results that are consistent with the purposes of the valuation. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

## **Benefit Provisions**

Appendix B of this report includes a summary of the major benefit provisions for System. There have been no material plan provision changes since the prior valuation.

3.	Total employer normal cost rate	5.95%	6.87%		
4.	Administrative expenses	0.70%	0.61%		
5.	Net employer normal cost rate	6.65%	7.48%		
6.	UAAL amortization contribution rate	N/A	11.35%		
7.	Total calculated employer contribution payable as a percentage of covered payroll	6.65%	18.83%		
8.	Total amortization cost to be allocated amongst employers	\$ 830,710	N/A		

Note: Per House Bill 8 (passed during the 2021 legislative session), amortization cost for the KERS

Non-Hazardous fund is allocated amongst employers based on their 2019 Actuarial Accrued Liability.

See appendix D for more information. Amortization cost for the hazardous fund is included in the contribution rate, payable as a percentage of payroll.

## **Summary of Principal Assumptions and Methods**

Below is a summary of the principal economic assumptions, cost method, and the method for financing the unfunded actuarial accrued liability:

	Non-Hazardous	Hazardous
Valuation date:	June 30, 2025	June 30, 2025
Actuarial cost method:	Entry Age Normal	Entry Age Normal
Amortization method:	Level percentage of payroll (0% payroll growth assumed)	Level percentage of payroll (0% payroll growth assumed)
Amortization period for contribution rate:	30-year closed period at June 30, 2019 Gains/losses incurring after 2019 will be amortized over separate closed 20-year amortization bases	30-year closed period at June 30, 2019 Gains/losses incurring after 2019 will be amortized over separate closed 20-year amortization bases
Asset valuation method:	5-Year Smoothed Market	5-Year Smoothed Market
Actuarial assumptions:		
Investment rate of return	5.25%	6.25%
Projected salary increases	3.30% to 15.30% (varies by service)	3.55% to 20.05% (varies by service)
Inflation	2.50%	2.50%
Post-retirement benefit adjustments	0.00%	0.00%
Retiree Mortality	System-specific mortality table based on mortality experience from 2013 to 2022, projected with the ultimate rates from MP-2020 mortality improvement scale using a base year of 2023.	System-specific mortality table based on mortality experience from 2013 to 2022, projected with the ultimate rates from MP-2020 mortality improvement scale using a base year of 2023.

8.	Funded Ratio		73.4%		166.4%

### Development of Actuarially Determined Contribution Rate Insurance Benefits

		June 30, 2025					
			lazardous	Hazardous			
			(1)	(2)			
1.	Total normal cost rate		1.69%	2.32%			
2.	Less: member contribution rate		<u>-0.61%</u>	<u>-0.81%</u>			
3.	Total employer normal cost rate		1.08%	1.51%			
4.	Administrative expenses		0.03%	0.04%			
5.	Net employer normal cost rate		1.11%	1.55%			
6.	UAAL amortization contribution rate		N/A	-10.32%			
7.	Total calculated employer contribution payable as a percentage of covered payroll Max (0%, item 5. + item6.)		1.11%	0.00%			
8.	Total amortization cost to be allocated amongst employers	\$	37,448	N/A			

Note: Per House Bill 8 (passed during the 2021 legislative session), amortization cost for the KERS

Non-Hazardous fund is allocated amongst employers based on their 2019 Actuarial Accrued Liability.

See appendix D for more information. Amortization cost for the hazardous fund is included in the contribution rate, payable as a percentage of payroll.

#### Note:

Budgeted contribution rates for FYE 2026 were known at the time of the June 30, 2025 Valuation. Amortization bases established at this valuation date were adjusted accordingly.

Per House Bill 8 (passed during the 2021 legislative session), amortization cost for the KERS Non-Hazardous fund is allocated amongst employers based on their 2019 Actuarial Accrued Liability. See appendix D for more information. Amortization cost for the hazardous fund is included in the contribution rate, payable as a percentage of payroll.

ASSESSMENT AND DISCLOSURE OF RISK

# Risks Associated with Measuring the Accrued Liability And Actuarially Determined Contribution

(As Required by ASOP No. 51)

The determination of KERS's accrued liability and actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. The risk measures illustrated in this section are intended to aid stakeholders in understanding the effects of future experience differing from the assumptions used in performing an actuarial valuation. These risk measures may also help with illustrating the potential volatility in the funded status and actuarially determined contributions that result from differences between actual experience and the expected experience based on the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience (economic and demographic) differing from the assumptions, changes in assumptions due to changing conditions, changes in contribution requirements due to modifications to the funding policy, and changes in the liability and cost due to changes in plan provisions or applicable law. The scope of this actuarial valuation does not include any analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the System's future financial condition include:

- Investment risk actual investment returns may differ from expected returns;
- Longevity risk members may live longer or shorter than expected and receive pensions for a time period different than assumed;
- Other demographic risks members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future contributions differing from expected;
- Salary and payroll risk actual salaries and total payroll may differ from expected, resulting in actual future accrued liabilities or contributions differing from expected;
- Asset/Liability mismatch changes in assets may be inconsistent with changes in liabilities, thereby
  altering the relative difference between the assets and liabilities which may alter the funded status
  and contribution requirements;
- Contribution risk actual contributions may differ from expected future contributions (for example, actual contributions not being paid in accordance with the System's funding policy, withdrawal liability assessments or other anticipated payments to the plan are not being paid, or material changes occurring in the anticipated number of covered employees, covered payroll, or another relevant contribution base).

Effects of certain experience can generally be anticipated. For example, if investment returns since the most recent actuarial valuation are less (or more) than the assumed rate of return, then the funded status of the plan can be expected to decrease (or increase) more than anticipated.

The required contributions in this report were established in accordance with applicable Statutes and assumptions adopted by the Board. However, stakeholders should be aware that the scheduled contributions specified in State Code do not necessarily guarantee that the contribution requirements will not increase in a future year.

#### **Employer Risk with Contribution Rates**

Currently contributions for the hazardous fund are collected from participating employers based on the employer's total payroll of employees who are earning benefits in KERS (i.e. covered payroll). The actuarially determined contribution rate is comprised of two components - the normal cost rate (to pay for the benefits accruing in the next year) and the unfunded amortization (to pay for the benefits accrued by members in previous years). The unfunded amortization is calculated by first determining the dollar amount necessary to pay for the unfunded liability based on KERS's funding policy, and then by dividing that dollar amount by expected covered payroll to convert that contribution requirement to a percentage of payroll (i.e. a contribution rate).

As the contribution requirement, as a percentage of payroll, increases then there is increased incentive for participating employers to make deliberate business action to reduce their payroll reported to the System in order to reduce their pension cost. House Bill 8 passed during the 2021 legislative session and changed how the amortization cost would be collected and allocated amongst employers in the non-hazardous fund. This portion of the contribution requirement is no longer collected as a percentage of payroll for the non-hazardous fund.

### **Plan Specific Risk Measures**

Risks faced by a pension plan evolve over time. A relatively new plan with virtually no assets and paying few benefits will experience lower investment risk than a mature plan with a significant amount of assets and large number of members receiving benefits. There are a few measures that can assist stakeholders in understanding and comparing the maturity of a plan to other systems, which include:

- Ratio of market value of assets to payroll: The relationship between assets and payroll is a useful indicator of the potential volatility of contributions. If assets are approximately the same as covered payroll, an investment return that is 5% different than assumed would equal 5% of payroll. In another example, if the assets are approximately twice as large as covered payroll, an investment return that is 5% different than assumed would equal 10% of payroll. A ratio that increases over time generally indicates the potential of an increasing volatility in employer contribution rates as a percentage of payroll.
- Ratio of actuarial accrued liability to payroll: The ratio of actuarial accrued liability to payroll can be used as a measure to indicate the potential volatility of contributions due to volatility in the liability experience. For instance, if the actuarial accrued liability is 5 times the size of the covered payroll, then a change in the liability that is 2% different than expected would be a change in magnitude that is 10% of payroll. A ratio that increases over time generally indicates the potential of an increasing volatility in employer contribution rates as a percentage of payroll.
- Percentage of Expected Contributions Actually Received: This measure identifies the percentage difference between the contributions the fund expects to receive during the fiscal year to and actual contributions received by the fund during the fiscal year. A percentage that is less than 100% means that actual contributions the fund received were less than the expected contributions determined by a prior actuarial valuation. On the other hand, a percentage that is greater than 100% means that actual contributions the fund received were more than the expected contributions.

• Ratio of active to retired members: A relatively mature open plan is likely to have close to the same number of actives to retirees resulting in a ratio that is around 1.0. On the other hand, a super-mature plan, or a plan that is closed to new entrants will have more retirees than active members resulting in a ratio below 1.0. As this ratio declines, a larger portion of the total actuarial accrued liability in the System is attributable to retirees. This metric also typically moves in tandem with the liability to payroll metric, which provides an indication of potential contribution volatility.

The following tables provide a summary of these measures for KERS Non-Hazardous and Hazardous Funds for the current year and the prior four years so stakeholders can identify how these measures are trending. While ASOP No. 51 requires this disclosure with respect to only the retirement funds, we have included this information for the insurance funds for completeness.

<sup>&</sup>lt;sup>1</sup> Expected contribution for FYE2025 based on the actuarially determined contribution rate of 23.74% from the June 30, 2023 valuation, and expected compensation based on census data from the June 30, 2024 valuation. As of the 2018 valuation (FYE2020), the required employer contribution was 0% of pay for the insurance fund.

### **Low-Default-Risk Obligation Measure**

#### Introduction

In December 2021, the Actuarial Standards Board (ASB) adopted a revision to Actuarial Standard of Practice (ASOP) No. 4, Measuring Pension Obligations and Determining Pension Plan Costs or Contributions. The revised ASOP No. 4 requires the calculation and disclosure of a liability referred to by the ASOP as the "Low-Default-Risk Obligation Measure" (LDROM). The rationale that the ASB cited for the calculation and disclosure of the LDROM was included in the Transmittal Memorandum of ASOP No. 4 and is presented below (emphasis added):

"The ASB believes that the calculation and disclosure of this measure provides appropriate, useful information for the intended user regarding the funded status of a pension plan. The calculation and disclosure of this additional measure is not intended to suggest that this is the "right" liability measure for a pension plan. However, the ASB does believe that this additional disclosure provides a more complete assessment of a plan's funded status and provides additional information regarding the security of benefits that members have earned as of the measurement date."

#### Comparing the Accrued Liabilities and the LDROM

One of the fundamental financial objectives of the Kentucky Employees' Retirement System (KERS) is to finance each member's retirement benefits over the period from the member's date of hire until the member's projected date of retirement (entry age actuarial cost method) as a level percentage of payroll. To fulfill this objective, the discount rate that is used to value the accrued liabilities is set equal to the **expected return** on each fund's diversified portfolio of assets (referred to sometimes as the investment return assumption). For the non-hazardous retirement fund, the investment return assumption is 5.25%. For the hazardous retirement fund, the investment return assumption is 6.25%.

The LDROM is meant to approximately represent the lump sum cost to a plan to purchase low-default-risk fixed income securities whose resulting cash flows essentially replicate in timing and amount the benefits earned (or the costs accrued) as of the measurement date. The LDROM is very dependent upon market interest rates at the time of the LDROM measurement and can vary greatly from year to year. The lower the market interest rates, the higher the LDROM, and vice versa. The LDROM results presented in this report are based on the entry age actuarial cost method and discount rates based upon the intermediate rate from the FTSE Pension Discount Curve and Liability Index published by the Society of Actuaries. This rate is 5.46% as of June 30, 2025. Note, since the investment return assumption for the non-hazardous fund is currently less than the 5.46% rate, the LDROM measurement is shown as equal to the valuation liabilities. This measure may not be appropriate for assessing the need for or amount of future contributions. This measure may not be appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligation.

In normal economic conditions, the difference between the two measures (Valuation and LDROM) is one illustration of the savings the sponsor anticipates by taking on risk in a diversified portfolio. However, the LDROM is not a particularly useful measure for the non-hazardous fund as of June 30, 2025 because of the market rate used as a reference on this date to comply with this disclosure requirement.

#### **Non-Hazardous Retirement Fund**

Valuation Accrued Liabilities	LDROM	
\$16,839,319,157	\$16,839,319,157	

#### **Hazardous Retirement Fund**

Valuation Accrued Liabilities	LDROM
\$1,488,008,170	\$1,632,159,919

**ACTUARIAL ASSUMPTIONS AND METHODS** 

### **Summary of Actuarial Methods and Assumptions**

The following presents a summary of the actuarial assumptions and methods used in the valuation of the Kentucky Employees Retirement System.

In general, the assumptions and methods used in the valuation are based on the actuarial experience study as of June 30, 2022 and adopted by the Board in June 2023.

#### *Investment return rate*:

Assumed annual rate of 5.25% net of investment expenses for the non-hazardous retirement fund

Assumed annual rate of 6.25% net of investment expenses for the hazardous retirement fund Assumed annual rate of 6.50% net of investment expenses for the insurance funds

### Price Inflation:

Assumed annual rate of 2.50%

Payroll Growth Assumption (used for amortization of unfunded accrued liabilities):

Assumed annual rate of 0.00%

### Rates of Annual Salary Increase:

Assumed rates of annual salary increases are shown below.

	Annual Rates of Salary						
Service Years	Merit & Seniority		Price Inflation & Productivity		Total Increase		
	Non-Hazardous	Hazardous	Non-Hazardous	Hazardous	Non-Hazardous	Hazardous	
0	12.00%	16.50%	3.30%	3.55%	15.30%	20.05%

73	30.0%	33.0%							
74	30.0%	33.0%							
75	100.0%	100.0%							

 $<sup>^1</sup>$  The annual rate of retirement is 12% for male members and 14% for female members with 25-26 years of service.

Non-Hazardous: There is a 1% increase in the first two years a member becomes eligible under the age of 65. For members hired after 7/1/2003, the rates shown above are multiplied by 80% if the member is under age 65 to reflect the different retiree health insurance benefit. Hazardous: For members hired after 7/1/2003 and prior to 9/1/2008, the rates shown above are multiplied by 80% if the member is under age 65 to reflect the different retiree health insurance benefit.

<sup>&</sup>lt;sup>2</sup> The annual rate of retirement is 100% at age 65.

<sup>&</sup>lt;sup>3</sup> The annual rate of retirement is 100% at age 60.

### Disability rates:

An abbreviated table with assumed rates of disability is shown below.

	Non-H	azardous	Haza	rdous
Age	Male	Female	Male	Female
20	0.03%	0.03%	0.05%	0.05%
30	0.05%	0.05%	0.08%	0.08%
40	0.11%	0.11%	0.18%	0.18%
50	0.31%	0.31%	0.50%	0.50%
60	0.80%	0.80%	1.32%	1.32%

Withdrawal rates (for causes other than disability and retirement):

Assumed annual rates of withdrawal are shown below and include pre-retirement mortality rates as described on the next page.

Service	Annual Rates of Withdrawal			
Years	Non-Hazardous	Hazardous		
1	22.00%	32.50%		
2	18.10%	25.58%		
3	14.73%	19.66%		
4	12.77%	16.19%		
5	11.37%	13.73%		
6	10.29%	11.82%		
7	9.41%	10.26%		
8	8.66%	8.93%		
9	8.01%	7.79%		
10	7.44%	6.79%		
11	6.93%	5.89%		
12	6.47%	5.07%		
13	6.04%	4.33%		
14	5.65%	3.64%		
15	5.29%	3.00%		
16	4.96%	2.42%		
17	4.64%	1.86%		
18	4.36%	1.34%		
19	4.07%	0.86%		
20	3.82%	0.39%		
21	3.56%	0.00%		
22	3.32%	0.00%		
23	3.10%	0.00%		
24	2.88%	0.00%		
25	2.67%	0.00%		
26 & Over	0.00%	0.00%		

### Mortality Assumption:

Pre-retirement mortality: PUB-2010 General Mortality table, for the non-hazardous funds, and the PUB-2010 Public Safety Mortality table for the hazardous funds, projected with the ultimate rates from the MP-2020 mortality improvement scale using a base year of 2010.

Post-retirement mortality (non-disabled): System-specific mortality table based on mortality experience from 2013-2022, projected with the ultimate rates from MP-2020 mortality improvement scale using a base year of 2023.

The following table provides the life expectancy for a non-disabled retiree in future years based on the assumption with full generational projection:

Life Expectancy for an Age 65 Retiree in Years							
Gender	Year of Retirement						
	2025 2030 2035 2040 2045						
Male	19.8	20.2	20.6	21.0	21.3		
Female	22.4 22.7 23.1 23.4 23.7						

Post-retirement mortality (disabled): PUB-2010 Disabled Mortality table, with rates multiplied by 150% for both male and female rates, projected with the ultimate rates from the MP-2020 mortality improvement scale using a base year of 2010.

#### Marital status:

100% of employees are assumed to be married, with the female spouse 3 years younger than the male spouse.

### Line of Duty/Duty-Related Disability

Non-Hazardous: 2% of disabilities are assumed to be duty-related (100% of which are assumed to be "total and permanent")

Hazardous: 10% of disabilities are assumed to occur in the line of duty (10% of which are assumed to be "total and permanent")

### Line of Duty Death

25% of deaths are assumed to occur in the line of duty

### Dependent Children:

For members in the Hazardous Plan who receive a duty-related death or disability benefit, the member is assumed to be survived by two dependent children, each age 6 with payments for 15 years.

### Form of Payment:

Members are assumed to elect a life-only annuity at retirement.

#### Actuarial Cost Method:

Entry Age Normal, Level Percentage of Pay. The Entry Age Normal actuarial cost method allocates the System's actuarial present value of future benefits to various periods based upon service. The portion of the present value of future benefits allocated to years of service prior to the valuation date is the actuarial accrued liability, and the portion allocated to years following the valuation date is the present value of future normal costs. The normal cost is determined for each active member as the level percent of pay necessary to fully fund the expected benefits to be earned over the career of each individual active member. The normal cost is partially funded with active member contributions with the remainder funded by employer contributions.

#### Health Care Age Related Morbidity/Claims Utilization:

To model the impact of aging on the underlying health care costs for Medicare retirees, the valuation relied on the Society of Actuaries' 2013 Study "Health Care Costs – From Birth to Death". Table 4 (Development of Plan Specific Medicare Age Curve) was used to model the impact of aging for ages 65 and over.

#### Health Care Cost Trend Rates:

Year	Non-Medicare Plans <sup>1</sup>	Medicare Plans¹	Dollar Contribution <sup>2</sup>
2027	7.35%	12.00%	1.50%
2028	7.20%	8.00%	1.50%
2029	7.05%	8.00%	1.50%
2030	6.90%	7.50%	1.50%
2031	6.75%	7.00%	1.50%
2032	6.50%	6.50%	1.50%
2033	6.25%	6.00%	1.50%
2034	6.00%	5.50%	1.50%
2035	5.75%	5.00%	1.50%
2036	5.50%	4.50%	1.50%
2037	5.25%	4.25%	1.50%
2038	5.00%	4.25%	1.50%
2039	4.75%	4.25%	1.50%
2040	4.50%	4.25%	1.50%
2041 & Beyond	4.25%	4.25%	1.50%

<sup>&</sup>lt;sup>1</sup>All increases are assumed to occur on January 1. The 2026 premiums were known at the time of the valuation and were incorporated into the liability measurement.

The healthcare trend assumption is based on the framework developed in the Society of Actuaries' Getzen Model. The ultimate trend assumption of 4.25% is based on a 2.50% inflation assumption plus 1.75% long-term real GDP growth.

<sup>&</sup>lt;sup>2</sup>Applies to members participating on or after July 1, 2003. All increases are assumed to occur on July 1.

#### Health Care Participation Assumptions:

 Active members are assumed to elect health coverage at retirement at the following participation rates.

Service at Retirement	Members participating before 7/1/2003*	Members participating after 7/1/2003
Under 10	50%	100%
10-14	75%	100%
15-19	90%	100%
Over 20	100%	100%

<sup>\* 100%</sup> of members with a duty disability or a duty death (in service) benefit are assumed to elect coverage at retirement.

• Future retirees are assumed to have a similar distribution by plan type as the current retirees.

Medicare Plan	Participation Percentage	Non-Medicare Plan	Participation Percentage
Medical Only <sup>1</sup>	5%	LivingWell Basic	4%
<b>Essential Plan</b>	7%	LivingWell CDHP	35%
Premium Plan	88%	LivingWell PPO	61%

<sup>&</sup>lt;sup>1</sup> Includes Mirror Plans

- 50% of deferred vested members participating before July 1, 2003 are assumed to elect health coverage at retirement. 100% of deferred vested members participating after July 1, 2003 are assumed to elect health coverage at retirement.
- Deferred vested members receiving insurance benefits from the non-hazardous fund are assumed to begin health coverage at age 55 for members participating before September 1, 2008, at age 60 for members participating on or after September 1, 2008 but before January 1, 2014, and at age 65 for members participating on or after January 1, 2014.
- Deferred vested members receiving insurance benefits from the hazardous fund are assumed to begin health coverage at age 50 for members participating before January 1, 2014 and at age 60 for members participating on or after January 1, 2014.
- 50% of future retirees, with hazardous service, are assumed to elect spouse health care coverage. No dependent coverage is assumed for members who only have non-hazardous service. 100% of spouses with health care coverage are assumed to continue coverage after the member's death.

#### Other Assumptions

- 1. Valuation payroll (used for determining the amortization contribution rate): Current fiscal year payroll.
- Individual salaries used to project benefits: For salary amounts prior to the valuation date, the salary from the last fiscal year is projected backward with the valuation salary scale assumption. For future salaries, the salary from the last fiscal year is projected forward with one year's salary scale.
- 3. Pay increase timing: Beginning of (fiscal) year. This is equivalent to assuming that reported salaries represent amounts paid to members during the year ending on the valuation date.
- 4. Current active members that terminated employment (for reasons other than retirement, disability, or death) are assumed to commence their retirement benefits at first unreduced retirement eligibility. Members are assumed to elect a refund of member contributions if the value of their account balance exceeds the present value of the deferred benefit. Members participating in the Cash Balance plan are assumed to elect to receive a lump sum of their cash balance account if their account balance exceeds the present value of the deferred benefit and the member is not eligible for insurance benefits at termination.
- 5. The beneficiaries of current active members that die while active are assumed to commence their survivor benefits at the member's first unreduced retirement eligibility. Beneficiaries are assumed to elect a refund of member contributions if the value of the member's account balance exceeds the present value of the survivor benefit. Beneficiaries of active members that die while in the line of duty are assumed to commence their survivor benefits immediately at the death of the member.
- 6. There will be no recoveries once disabled.
- 7. Cash Balance Provisions: The cash balance interest crediting rate while a member is an active employee is assumed to equal 5.90% for the non-hazardous fund and 6.75% for the hazardous fund. The interest crediting rate after a member terminates employment is 4% for all plans.
- 8. Decrement timing: Decrements of all types are assumed to occur mid-year. Decrement rates are used as described in this report, without adjustment for multiple decrement table effects.
- 9. Service: All members are assumed to accrue 1 year of benefit and eligibility service each year.
- 10. Eligibility testing: Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
- 11. Incidence of Contributions: Contributions are assumed to be received continuously throughout the year based upon the computed percent of payroll shown in this report, and the actual payroll payable at the time contributions are made.

- 12. Current Inactive Population (Retirement Funds): All non-vested members are assumed to take an immediate refund of member contributions. Vested members are assumed to elect an immediate refund of member contributions at the valuation date if the value of their account balance exceeds the present value of their deferred benefit. Non-hazardous members are assumed to retire at age 65. Hazardous members hired prior to September 1, 2008 are assumed to retire at age 55 and hazardous members hired on or after September 1, 2008 are assumed to retire at age 60.
- 13. The additional \$5 per year of service insurance dollar subsidy effective January 1, 2023 is assumed to be paid in all applicable years.
- 14. For members who earned service within multiple Kentucky retirement systems, the cost of their health insurance benefits is allocated between the funds the member earned service. For members currently in receipt of post-retirement health insurance benefits, this split is provided within the participant data and the liability for each member is allocated accordingly. For active members, we have allocated the entirety of the member's insurance liability to the fund in which the member is currently contributing and earning service.

#### Participant Data

Participant data was supplied in electronic text files. There were separate files for (i) active and inactive members, and (ii) members and beneficiaries receiving benefits.

The data for active and terminated members included date of birth, gender, date of participation, benefit tier indicator, service with the current system, total vesting service, salary, employee contribution account balances, and employer pay credits for members participating in the cash balance plan. For retired members and beneficiaries, the data included date of birth, gender, spouse's date of birth (where applicable), amount of monthly benefit, date of retirement, and form of payment code.

Assumptions were made to correct for missing, bad, or inconsistent data. These had no material impact on the results presented.

Changes in assumptions since the prior valuation:

In conjunction with the review of healthcare per capita claims cost, the assumed increase in future healthcare costs, or trend assumption, is reviewed on an annual basis. The trend assumption was increased as a result of our review.

## **Development of Baseline Claims Cost**

For non-Medicare retirees, the initial per capita costs were based on the plan premiums effective January 1, 2026, and are used for both current and future retirees. An inherent assumption in this methodology is that the projected future retirees will have a similar distribution by plan type as the current retirees. The spouse/dependent premium of \$1,272.35 for non-Medicare retirees is based on a blending of Family and Couple premiums for the current retirees that have over 4 years of hazardous service. The fully-insured premiums paid to the Kentucky Employees' Health Plan (KEHP) are blended rates based on the combined experience of active and retired members. Because the average cost of providing health care benefits to retirees under age 65 is higher than the average cost of providing health care benefits to active employees, there is an implicit rate subsidy for the non-Medicare eligible retirees. Actuarial Standard of Practice No. 6 (ASOP No. 6) requires aging subsidies (or implicit rate subsidies) to be recognized. However, the health insurance trusts are only used to reimburse KEHP for the employer's portion of the blended premiums. Said another way, the trusts are not used to fund the difference between the underlying retiree claims and the blended KEHP premiums. As a result, the retiree health care liabilities developed in this report for the non-Medicare retirees are based solely on the premiums charged by KEHP, without any age-adjustment. GASB Statements No. 74 and No. 75 prohibit such a deviation from ASOP No. 6. The liabilities developed in this report are solely for the purpose of funding the benefits paid by the health insurance funds and are not appropriate for financial statement disclosures required by GASB. GRS provides separate GASB reports which include the liabilities associated with the implicit rate subsidy.

2026 MONTHLY COSTS FOR THOSE NOT ELIGIBLE FOR MEDICARE						
AGE	AGE MEMBER SPOUSE/DEPENDENTS					
<65	\$1,083.05	\$1,272.35				

For Medicare retirees, the initial per capita costs were estimated based on the plan premiums effective January 1, 2026, and are used for both current and future retirees. An inherent assumption in this methodology is that the projected future retirees will have a similar distribution by plan type as the current retirees. Age graded and sex distinct premiums are utilized for retirees over the age of 65. These costs are appropriate for the unique age and sex distribution currently existing. Over the future years covered by this valuation, the age and sex distribution will most likely change. Therefore, our process "distributes" the average premium over all age/sex combinations and assigns a unique premium for each combination. The age/sex specific costs more accurately reflect the health care utilization and cost at that age.

2026 MONTHLY COSTS FOR THOSE ELIGIBLE FOR MEDICARE				
AGE MALE FEMALE				
65	\$ 167.73	\$ 158.20		
75	196.24	191.49		
85	207.51	209.96		

Appendix B of the report provides a full schedule of premiums.

Blake Orth, FSA, EA, MAAA

# **APPENDIX B**

**BENEFIT PROVISIONS** 

## Summary of Benefit Provisions for Kentucky Employees Retirement System (KERS)

## **KERS Non-Hazardous Employees**

Retirement: Tier 1, Participation before 9/1/2008

Normal Retirement

Eligibility

Age 65 with at least 1 month of service credit; or

Any age with at least 27 years of service

Benefit Amount If a member has at least 48 months of service, the monthly benefit is 2.00%

times final average compensation times years of service. For members who did not have 13 months of service credit for 1/1/1998-1/1/1999, the monthly benefit is 1.97% times final average compensation times years of

service.

If a member has less than 48 months of service, the monthly benefit is the actuarial equivalent of two times the member's contributions with interest.

Final average compensation is based on the member's highest 5 years of

compensation.

Early Retirement

Eligibility

Any age (prior to age 65) with at least 25 years of service; or

Age 55 with at least 5 years of service

Early Retirement

Reduction

Normal Retirement benefit reduced 6.5% per year for the first five years and 4.5% per year for the next five years for each year the member's retirement

eligibility precedes the member's normal retirement date.

Retirement: Tier 2, Participation on or after 9/1/2008 but before 1/1/2014

Normal Retirement

Eligibility

Age 65 with at least 5 years of service; or

Rule of 87 (Age 57 or older if age plus service equals 87)

Benefit Amount

The monthly benefit is equal to the applicable benefit multiplier times final average compensation times years of service.

Years of Service	Benefit Multiplier
10 or less	1.10%
10-20	1.30%
20-26	1.50%
26-30	1.75%
Greater than 30*	2.00%

<sup>\*</sup> The 2.00% benefit multiplier only applies to service credit in excess of 30 years. If a member has greater than 30 years of service at retirement, service prior to 30 years will be multiplied by the 1.75% benefit multiplier.

Final compensation is based on the member's last 5 years of compensation.

Early Retirement Eligibility

Age 60 with at least 10 years of service

Early Retirement Reduction

Normal Retirement benefit reduced 6.5% per year for the first five years and 4.5% per year for the next five years for each year the member's retirement date precedes the member's normal retirement eligibility.

Retirement: Tier 3, Participation on or after 1/1/2014

Normal Retirement

Eligibility

Age 65 with at least 5 years of service; or

Rule of 87 (Age 57 or older if age plus service equals 87)

Benefit Amount Each year that the member is active, a 4.00% employer pay credit and the

> employee's 5.00% contribution will be credited to each member's hypothetical cash balance account. The hypothetical account will earn interest at a minimum rate of 4%, annually. If the System's geometric average net investment return for the previous five years exceeds 4%, then the hypothetical account will be credited with an additional amount of interest in that year equal to 75% of the amount of the return which exceeds 4%. All interest credits will be applied to the hypothetical account balance on June 30 based on the account balance as of June 30 of the previous year.

At retirement, the member's hypothetical account balance may be

converted into an annuity based on an actuarial factor.

Early Retirement

Eligibility

Deferred Vested Benefit: Tier 1, Participation before 9/1/2008

Eligibility At least 1 month of service credit

Benefit Amount Normal retirement benefit deferred to normal retirement age, or a reduced

retirement benefit at an early retirement age

Deferred Vested Benefit: Tier 2, Participation on or after 9/1/2008 but before 1/1/2014

Eligibility 5 years of service

Benefit Amount Normal retirement benefit deferred to normal retirement age, or a reduced

retirement benefit at an early retirement age

Deferred Vested Benefit Tier 3, Participation on or after 1/1/2014

Eligibility 5 years of service

Benefit Amount At termination of employment, members may choose to leave their account

balance with the System and retire once they are eligible. The hypothetical account balance will earn 4% annual interest after termination. Members may also choose to withdrawal their entire accumulated balance. If a member does not have 5 years of service at termination, the member is eligible to receive a partial refund of their account balance. This refund

includes the member's contributions with interest.

Disability Retirement: Participation before 8/1/2004

Eligibility 60 months of service (requirement is waived if line of duty disability)

Disability Benefit Disability benefits are calculated in the same manner as the normal

retirement benefit with years of service and final compensation being determined as of the date of disability, except that service credit shall be added to the person's total service beginning with the last date of paid employment and continuing to the member's 65<sup>th</sup> birthday, with total service not exceeding 25 years. Total service credit added shall not be greater than the member's actual service at disability. For members with at least 25 years of service on the last day of paid employment but less than 27 years of service, total service shall be 27 years. For members with 27 or

more years of service credit, actual service will be used.

Disability Retirement: Participation on or after 8/1/2004 but before 1/1/2014

Eligibility 60 months of service (requirement is waived if line of duty disability)

Disability Benefit The higher of 20% of the member's final monthly rate of pay or the

member's normal retirement benefit (without reduction for early

retirement) with years and final compensation being determined as of the

date of disability.

Disability Retirement: Participation on or after 1/1/2014

Eligibility 60 months of service (requirement is waived if line of duty disability)

Disability Benefit The higher of 20% of the member's final monthly rate of pay or the

member's retirement benefit calculated at the member's normal retirement

date.

**Duty-Related Disability Benefit** 

Disability Benefit If the disability is a direct result of an act in the line of duty, the benefit shall

not be less than 25% of the member's final monthly final rate of pay. If the disability is deemed to be Total and Permanent (and the member is working in a non-hazardous position that could be certified as a hazardous position), then this benefit shall not be less than 75% of the member's monthly

average pay.

Child Benefit Additionally, each eligible dependent child will receive 10% of the member's

monthly average pay up to a maximum of 40%. Member and dependent payment shall not exceed 100% of member's monthly average pay.

Pre-Retirement Death Benefit

Eligibility Eligible for early or normal retirement; or

Under age 65 with at least 60 months of service and actively working at the

time of death; or

At least 144 months of service, if no longer actively working

Spouse Benefit The member's retirement benefit calculated in the same manner as if the

member had retired on the day of the member's death and elected a 100% joint and survivor benefit. The benefit is actuarially reduced if the member

dies prior to their normal retirement age.

Pre-Retirement Death Benefit (Death in the Line of Duty)

Eligibility One month of service credit

Spouse Benefit A \$10,000 lump sum payment plus a monthly payment of 75% of the

deceased member's final monthly average pay. Each dependent child will receive 10% of the final monthly average pay (not to exceed a total child benefit of 25% while the spouse is alive). A spouse may also elect the non-

line of duty death benefit.

Child Benefit In the event there is no surviving spouse, the benefit is 50% of final monthly

average pay for one child, 65% of final monthly average pay for two children, or 75% of final monthly average pay for three or more eligible

children.

Post-Retirement Death Benefit

Eligibility 48 months of service, and in receipt of retirement benefits

Death Benefit A \$5,000 lump sum payment

Member Contributions

Tier 1, Participation

before 9/1/2008 5% of creditable compensation. Members who do not receive a retirement

benefit are entitled to a full refund of contributions with interest. The

annual interest rate is set by the Board, not less than 2.0%.

Tier 2, Participation on or after 9/1/2008 but before 1/1/2014

but before 1/1/2014 5% of creditable compensation plus 1% of creditable compensation, which is

deposited into the 401(h) account and is not refundable. Members who do not receive a retirement benefit are entitled to a refund of non-401(h)

contributions with interest. The annual interest rate is 2.5%.

Tier 3, Participation

after 1/1/2014 5% of creditable compensation plus 1% of creditable compensation, which is

deposited into the 401(h) account and is not refundable. Members who do

not receive a retirement benefit are entitled to a refund of non-401(h)

contributions with interest.

Changes in Non-Hazardous Retirement Benefits since the Prior Valuation

There have been no changes in benefits since the prior valuation.

## **KERS Hazardous Employees**

Retirement: Tier 1, Participation before 9/1/2008

**Normal Retirement** 

Eligibility

Age 55 with at least 1 month of service credit; or

Any age with at least 20 years of service

Benefit Amount If a member has at least 60 months of service, the monthly benefit is 2.49%

times final average compensation times years of service.

If a member has less than 60 months of service, the monthly benefit is the actuarial equivalent of two times the member's contributions with interest.

Final average compensation is based on the member's highest 3 years of

compensation.

Early Retirement

Eligibility

Age 50 with at least 15 years of service

Early Retirement Reduction

Normal Retirement benefit reduced 6.5% per year for the first five years and

4.5% per year for the next five years for each year the member's retirement

date precedes the member's normal retirement eligibility.

Retirement: Tier 2, Participation on or after 9/1/2008 but before 1/1/2014

Normal Retirement

Eligibility

Age 60 with at least 5 years of service; or Any age with at least 25 years of service

Benefit Amount

The monthly benefit is equal to the applicable benefit multiplier times final average compensation times years of service.

Years of Service	Benefit Multiplier
10 or less	1.30%
10-20	1.50%
20-25	2.25%
Greater than 25	2.50%

Final average compensation is based on the member's highest 3 years of compensation.

Early Retirement

Eligibility

Age 50 with at least 15 years of service

Early Retirement

Reduction

Normal Retirement benefit reduced 6.5% per year for the first five years and 4.5% per year for the next five years for each year the member's retirement date precedes the member's normal retirement eligibility.

Retirement: Tier 3, Participation on or after 1/1/2014

Normal Retirement

Eligibility

Age 60 with at least 5 years of service; or Any age with at least 25 years of service

Benefit Amount

Each year that the member is active, a 7.50% employer pay credit and the employee's 8.00% contribution will be credited to each member's hypothetical cash balance account. The hypothetical account will earn interest at a minimum rate of 4%, annually. If the System's geometric average net investment return for the previous five years exceeds 4%, then the hypothetical account will be credited with an additional amount of interest in that year equal to 75% of the amount of the return which exceeds 4%. All interest credits will be applied to the hypothetical account balance on June 30 based on the account balance as of June 30 of the previous year.

At retirement, the member's hypothetical account balance may be converted into an annuity based on an actuarial factor.

Early Retirement

Eligibility

N/A

Deferred Vested Benefit: Tier 1, Participation before 9/1/2008

Eligibility At least 1 month of service credit

Benefit Amount Normal retirement benefit deferred to normal retirement age, or a reduced

retirement benefit at an early retirement age

Deferred Vested Benefit: Tier 2, Participation on or after 9/1/2008 but before 1/1/2014

Eligibility 5 years of service

Benefit Amount Normal retirement benefit deferred to normal retirement age, or a reduced

retirement benefit at an early retirement age

Deferred Vested Benefit Tier 3, Participation on or after 1/1/2014

Eligibility 5 years of service

Benefit Amount At termination of employment, members may choose to leave their account

balance with the System and retire once they are eligible. The hypothetical account balance will earn 4% annual interest after termination. Members may also choose to withdrawal their entire accumulated balance. If a member does not have 5 years of service at termination, the member is eligible to receive a partial refund of their account balance. This refund

includes the member's contributions with interest.

Disability Retirement: Participation before 8/1/2004

Eligibility 60 months of service (requirement is waived if line of duty disability)

Disability Benefit Disability benefits are calculated in the same manner as the normal

retirement benefit with years of service and final compensation being determined as of the date of disability, except that if the member has less than 20 years of service at disability, service credit shall be added to the person's total service beginning with the last date of paid employment and continuing to the member's 55<sup>th</sup> birthday, with total service not exceeding 20 years. Total service credit added shall not be greater than the member's

actual service at disability.

Disability Retirement: Participation on or after 8/1/2004 but before 1/1/2014

Eligibility 60 months of service (requirement is waived if line of duty disability)

Disability Benefit The higher of 25% of the member's final monthly rate of pay or the

member's normal retirement benefit (without reduction for early

retirement) with years and final compensation being determined as of the

date of disability.

Disability Retirement: Participation on or after 1/1/2014

Eligibility 60 months of service (requirement is waived if line of duty disability)

Disability Benefit The higher of 25% of the member's final monthly rate of pay or the

member's retirement benefit calculated at the member's normal retirement

date.

Line of Duty Disability Benefit

Disability Benefit If the disability is a direct result of an act in the line of duty, the benefit shall

not be less than 25% of the member's final monthly final rate of pay. If the disability is deemed to be Total and Permanent, then this benefit shall not

be less than 75% of the member's monthly average pay.

Child Benefit Additionally, each eligible dependent child will receive 10% of the member's

monthly average pay up to a maximum of 40%. Member and dependent payment shall not exceed 100% of member's monthly average pay.

Pre-Retirement Death Benefit

Eligibility Eligible for early or normal retirement; or

Under age 55 with at least 60 months of service and actively working at the

time of death; or

At least 144 months of service, if no longer actively working

Spouse Benefit The member's retirement benefit calculated in the same manner as if the

member had retired on the day of the member's death and elected a 100% joint and survivor benefit. The benefit is actuarially reduced if the member

dies prior to their normal retirement age.

Pre-Retirement Death Benefit (Death in the Line of Duty)

Eligibility One month of service credit

Spouse Benefit A \$10,000 lump sum payment plus a monthly payment of 75% of the

deceased member's final monthly average pay. Each dependent child will receive 10% of the final monthly average pay (not to exceed a total child benefit of 25% while the spouse is alive). A spouse may also elect the non-

line of duty death benefit.

Non-Spouse Benefit If the beneficiary is only one person who is a dependent receiving at least

50% of his or her support from the member, the beneficiary may elect a

lump-sum payment of \$10,000.

Child Benefit In the event there is no surviving spouse, the benefit is 50% of final monthly

average pay for one child, 65% of final average pay for two children, or 75%

of final average pay for three or more eligible children.

Post-Retirement Death Benefit

Eligibility 48 months of service, and in receipt of retirement benefits

Death Benefit A \$5,000 lump sum payment

Member Contributions

Tier 1, Participation

before 9/1/2008 8% of creditable compensation. Members who do not receive a retirement

benefit are entitled to a full refund of contributions with interest. The

annual interest rate is set by the Board, not less than 2.0%.

Tier 2, Participation on or after 9/1/2008

but before 1/1/2014 8% of creditable compensation plus 1% of creditable compensation, which is

deposited into the 401(h) account and is not refundable. Members who do not receive a retirement benefit are entitled to a refund of non-401(h)

contributions with interest. The annual interest rate is 2.5%.

Tier 3, Participation

after 1/1/2014 8% of creditable compensation plus 1% of creditable compensation, which is

deposited into the 401(h) account and is not refundable. Members who do not receive a retirement benefit are entitled to a refund of non-401(h)

contributions with interest.

Changes in Hazardous Retirement Benefits since the Prior Valuation

There have been no changes in benefits since the prior valuation.

## **Summary of Main Retiree Insurance Benefit Provisions**

## Insurance: Participation began before 7/1/2003

**Benefit Eligibility** Recipient of a retirement allowance

**Benefit Amount** 

Non-Hazardous Service	Percentage of Member Premium Paid by Retirement System	Hazardous Service	Percentage of Member & Dependent Premium Paid by Retirement System
Less than 4 years	0%	Less than 4 years	0%
4 – 9 years	25%	4 – 9 years	25%
10 – 14 years	50%	10 – 14 years	50%
15 – 19 years	75%	15 – 19 years	75%
20 or more years	100%	20 or more years	100%

The percentage paid by the retirement system is applied to the 'contribution' plan selected by the Board.

<b>Duty Disability Retirement</b>	If disability was a result of injuries sustained while in the line of duty, the member receives 100% of the maximum contribution for the member and dependents. This benefit is provided to members in the Non-hazardous and Hazardous plans alike.
<b>Duty Death in Service</b>	If an active employee's death was a result of injuries sustained while in the line of duty, the member's spouse and children receive a fully subsidized

line of duty, the member's spouse and children receive a fully subsidized health insurance benefit. This benefit is provided to members in the Nonhazardous and Hazardous plans alike.

Non-Duty Death in Service

If the surviving spouses is in receipt of a pension allowance, he or she is eligible for continued health coverage. The percentage of the premium paid for by the retirement system is based on the member's years of hazardous service at the time of death.

**Surviving Spouse of a Retiree** A surviving spouse of a retiree, who is in receipt of a pension allowance, will receive a premium subsidy based on the member's years of hazardous service.

**Hazardous employees who** System's contribution for spouse and dependents is based on total retired prior to August 1, 1998 service.

## Insurance: Participation began on or after 7/1/2003

#### **Benefit Eligibility**

Recipient of a retirement allowance with at least 120 months of service at retirement (180 months if participation began on or after 9/1/2008)

#### **Non-Hazardous Subsidy**

Monthly contribution of \$10 for each year of earned non-hazardous service. The monthly contribution is increased by 1.5% each July 1. As of July 1, 2025, the Non-Hazardous monthly contribution was \$14.85/year of service. Upon the retiree's death, the surviving spouse may continue coverage (if in receipt of a retirement allowance) but will be 100% responsible for the premiums.

Effective January 1, 2023, members will receive an additional dollar contribution of \$5 for every year of non-hazardous service a member attains over 27 years. This additional dollar contribution does not increase by 1.5% annually and is only payable for non-Medicare retirees. Also, it is only payable when the applicable insurance fund is at least 90% funded on an actuarial value of asset basis as of the last actuarial valuation.

#### **Hazardous Subsidy**

Monthly contribution of \$15 for each year of earned hazardous service. The monthly contribution is increased by 1.5% each July 1. As of July 1, 2025, the Hazardous monthly contribution was \$22.27/year of service. Upon the retiree's death, the surviving spouse of a hazardous duty member will receive a monthly contribution of \$10 (\$14.85 as of July 1, 2025) for each year of hazardous service.

Effective January 1, 2023, members will receive an additional dollar contribution of \$5 for every year of hazardous service a Tier 1 member attains over 20 years and a Tier 2 member attains 25 years. This additional dollar contribution does not increase by 1.5% annually and is only payable for non-Medicare retirees. Also, it is only payable when the applicable insurance fund is at least 90% funded on an actuarial value of asset basis as of the last actuarial valuation.

#### **Duty Disability Retirement**

If disability was a result of injuries sustained while in the line of duty or was duty-related, the member receives a benefit based on at least 20 years of service. This benefit is provided to members in the Non-Hazardous and Hazardous plans alike.

If the disability is deemed to be Total and Permanent, the insurance premium for the member, the member's spouse, and the member's dependent children shall also be paid in full by the System. For non-hazardous members to be eligible for this benefit, they must be working in a position that could be certified as a hazardous position.

**Duty Death in Service** If an active employee's death was a result of injuries sustained while in

the line of duty, the member's spouse and children receive a fully subsidized health insurance benefit. This benefit is provided to members

in the Non-Hazardous and Hazardous plans alike.

Non-Duty Death in Service If the surviving spouse is in receipt of a pension allowance, he or she is

eligible for continued health coverage. The percentage of the premium paid for by the retirement system is based on the member's years of

hazardous service at the time of death.

## Monthly Health Plan Premiums – Effective January 1, 2026

Non-Medicare Plan Options							
Plan Option	Single	Parent Plus	Couple	Family	Family X-Ref		
LivingWell PPO	\$1,105.54	\$1,514.46	\$2,238.22	\$2,453.16	\$1,300.24		
LivingWell CDHP	1,090.42	1,475.34	2,144.14	2,383.68	1,247.34		
LivingWell Basic	1,059.88	1,447.24	2,150.90	2,385.14	1,244.12		
LivingWell HDHP	983.66	1,343.02	1,996.16	2,213.58	1,153.50		

Medicare Plan Options			
Medical Only Plan	\$194.23		
Essential Mirror Plan	264.56		
Premium Mirror Plan	404.67		
Essential Medical Advantage Plan	55.10		
Premium Medical Advantage Plan	199.94		

Contribution plan selected by the Board was the LivingWell PPO plan option for non-Medicare retirees. Contribution plan selected by the Board was the Premium Medical Advantage Plan for the Medicare retirees.

## Dollar Contribution Amount for Participation on or after 7/1/2003

Monthly contribution amounts per year of service as of July 1, 2025.

Non-Hazardous	Hazardous
Service	Service
\$14.85	\$22.27

Changes in Health Insurance Benefits since the Prior Valuation

None.

# **APPENDIX C**

**G**LOSSARY

## **Glossary**

**Actuarial Accrued Liability (AAL):** That portion, as determined by a particular Actuarial Cost Method, of the Actuarial Present Value of Future Plan Benefits which is not provided for by future Normal Costs. It is equal to the Actuarial Present Value of Future Plan Benefits minus the actuarial present value of future Normal Costs.

**Actuarial Assumptions:** Assumptions as to future experience under the Fund. These include assumptions about the occurrence of future events affecting costs or liabilities, such as:

- mortality, withdrawal, disablement, and retirement;
- future increases in salary;
- future rates of investment earnings and future investment and administrative expenses;
- characteristics of members not specified in the data, such as marital status;
- characteristics of future members;
- future elections made by members; and
- other relevant items.

**Actuarial Cost Method** or **Funding Method**: A procedure for allocating the Actuarial Present Value of Future Benefits to various time periods; a method used to determine the Normal Cost and the Actuarial Accrued Liability. These items are used to determine the ADC.

Actuarial Gain or Actuarial Loss: A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions, during the period between two Actuarial Valuation dates. Through the actuarial assumptions, rates of decrements, rates of salary increases, and rates of fund earnings have been forecasted. To the extent that actual experience differs from that assumed, Actuarial Accrued Liabilities emerge which may be the same as forecasted, or may be larger or smaller than projected. Actuarial gains are due to favorable experience, e.g., the fund's assets earn more than projected, salaries do not increase as fast as assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, actuarial losses are the result of unfavorable experience, i.e., actual results that produce actuarial liabilities which are larger than projected. Actuarial gains will shorten the time required for funding of the actuarial balance sheet deficiency while actuarial losses will lengthen the funding period.

**Actuarially Equivalent:** Of equal actuarial present value, determined as of a given date and based on a given set of Actuarial Assumptions.

**Actuarial Present Value (APV):** The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions. For purposes of this standard, each such amount or series of amounts is:

a. adjusted for the probable financial effect of certain intervening events (such as changes in compensation levels, marital status, etc.)

b. multiplied by the probability of the occurrence of an event (such as survival, death, disability, termination of employment, etc.) on which the payment is conditioned, and

c. discounted according to an assumed rate (or rates) of return to reflect the time value of money.

Actuarial Present Value of Future Plan Benefits: The Actuarial Present Value of those benefit amounts which are expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age and past and anticipated future compensation and service credits. The Actuarial Present Value of Future Plan Benefits includes the liabilities for active members, retired members, beneficiaries receiving benefits, and inactive, non-retired members either entitled to a refund or a future retirement benefit. Expressed another way, it is the value that would have to be invested on the valuation date so that the amount invested plus investment earnings would provide sufficient assets to pay all projected benefits and expenses when due.

**Actuarial Valuation**: The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a plan. An Actuarial valuation for a governmental retirement system typically also includes calculations that provide the financial information of the plan, such as the funded ratio, unfunded actuarial accrued liability and the ADC.

**Actuarial Value of Assets** or **Valuation Assets:** The value of the Fund's assets as of a given date, used by the actuary for valuation purposes. This may be the market or fair value of plan assets, but commonly actuaries use a smoothed value in order to reduce the year-to-year volatility of calculated results, such as the funded ratio and the ADC.

**Actuarially Determined:** Values which have been determined utilizing the principles of actuarial science. An actuarially determined value is derived by application of the appropriate actuarial assumptions to specified values determined by provisions of the law.

**Actuarially Determined Contribution (ADC):** The employer's periodic required contributions, expressed as a dollar amount or a percentage of covered plan compensation. The ADC consists of the Employer Normal Cost and the Amortization Payment.

Amortization Method: A method for determining the Amortization Payment. The most common methods used are level dollar and level percentage of payroll. Under the Level Dollar method, the Amortization Payment is one of a stream of payments, all equal, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the Amortization payment is one of a stream of increasing payments, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the stream of payments increases at the assumed rate at which total covered payroll of all active members will increase.

**Amortization Payment:** The portion of the pension plan contribution or ADC which is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.

**Closed Amortization Period:** A specific number of years that is counted down by one each year, and therefore declines to zero with the passage of time. For example if the amortization period is initially set at 30 years, it is 29 years at the end of one year, 28 years at the end of two years, etc. See Funding Period and Open Amortization Period.

**Decrements:** Those causes/events due to which a member's status (active-inactive-retiree-beneficiary) changes, that is: death, retirement, disability, or termination.

**Defined Benefit Plan:** A retirement plan that is not a Defined Contribution Plan. Typically a defined benefit plan is one in which benefits are defined by a formula applied to the member's compensation and/or years of service.

**Defined Contribution Plan:** A retirement plan, such as a 401(k) plan, a 403(b) plan, or a 457 plan, in which the contributions to the plan are assigned to an account for each member, and the plan's earnings are allocated to each account, and each member's benefits are a direct function of the account balance.

**Employer Normal Cost:** The portion of the Normal Cost to be paid by the employers. This is equal to the Normal Cost less expected member contributions.

**Experience Study:** A periodic review and analysis of the actual experience of the Fund which may lead to a revision of one or more actuarial assumptions. Actual rates of decrement and salary increases are compared to the actuarially assumed values and modified as deemed appropriate by the Actuary.

**Funded Ratio:** The ratio of the actuarial value of assets (AVA) to the actuarial accrued liability (AAL). Plans sometimes calculate a market funded ratio, using the market value of assets (MVA), rather than the AVA.

**Funding Period** or **Amortization Period:** The term "Funding Period" is used two ways. In the first sense, it is the period used in calculating the Amortization Payment as a component of the ADC. This funding period is specified in State statute. In the second sense, it is a calculated item: the number of years in the future that will theoretically be required to amortize (i.e., pay off or eliminate) the Unfunded Actuarial Accrued Liability, based on a statutory employer contribution rate, and assuming no future actuarial gains or losses.

**GASB**: Governmental Accounting Standards Board.

*GASB 67* and *GASB 68*: Governmental Accounting Standards Board Statements No. 67 and No. 68. These are the governmental accounting standards that set the accounting and reporting rules for public retirement systems and the employers that sponsor, participate in, or contribute to them. Statement No. 67 sets the accounting rules for the financial reporting of the retirement systems, while Statement No. 68 sets the rules for the employers that sponsor, participate in, or contribute to public retirement systems.

**Normal Cost:** That portion of the Actuarial Present Value of pension plan benefits and expenses which is allocated to a valuation year by the Actuarial Cost Method. Any payment in respect of an Unfunded

Actuarial Accrued Liability is not part of Normal Cost (see Amortization Payment). For pension plan benefits which are provided in part by employee contributions, Normal Cost refers to the total of employee contributions and employer Normal Cost unless otherwise specifically stated. Under the entry age normal cost method, the Normal Cost is intended to be the level cost (when expressed as a percentage of pay) needed to fund the benefits of a member from hire until ultimate termination, death, disability or retirement.

**Open Amortization Period:** An open amortization period is one which is used to determine the Amortization Payment but may not decrease by exactly one year in the subsequent year's actuarial valuation. For instance, if the initial period is set as 30 years, the same 30-year period is used in determining the Amortization Period each year.

**Unfunded Actuarial Accrued Liability:** The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets. This value may be negative in which case it may be expressed as a negative Unfunded Actuarial Accrued Liability, also called the Funding Surplus.

**Valuation Date or Actuarial Valuation Date:** The date as of which the value of assets is determined and as of which the Actuarial Present Value of Future Plan Benefits is determined. The expected benefits to be paid in the future are discounted to this date.

#### Notes and Assumptions

<sup>&</sup>lt;sup>1</sup> Agency names and classification information have been provided to GRS by KPPA. We have reviewed this data for consistency but did not audit the data.

<sup>&</sup>lt;sup>2</sup> The accrued liability as of June 30, 2019 has been adjusted based on the approved employer appeals. The liability associated with these appeals was compiled by KPPA based on the liability amounts provided by GRS.

<sup>&</sup>lt;sup>3</sup> The amortization cost for certain employers (as defined in KRS 61.565[1](d)1d) will not be adjusted in terms of dollars paid by the individual employer, except for after the completion of an actuarial investigation as provided by KRS 61.670, so long as at least four years have passed since the last adjustment. The amortization cost for applicable employers has been first adjusted in FYE 2027.

<sup>&</sup>lt;sup>4</sup> The normal cost and amortization cost is based on the June 30, 2025 actuarial valuation, which set the contribution requirement for FYE 2027 and FYE 2028.
